

This document is about process install. More info about Phperport is into its website:
<http://community.igalia.com/twiki/bin/view/PhpReport/>

DOWNLOAD, BUILD AND INSTALL PHPREPORT PACKAGE FROM CVS

With recipe below you can download phpreport code, build it and start install process. Once process start, you will be answer about some aspects configuration with Dialog menu.

```
cvcs -d :pserver:anonymous@cvcs.igalia.com:/var/publiccvcs export -r
PHPREPORT_1_5 phpreport
mv phpreport phpreport-1.5
cd phpreport-1.5
dpkg-buildpackage -rfakeroot -us -uc
cd ..
sudo dpkg -i phpreport_1.5_i386.deb
```

RECONFIGURE PHPREPORT PACKAGE

If you want control install process you can tip into shell

```
sudo dpkg-reconfigure -p your_priority_favourite_level phpreport
```

Your_priority_favourite_level = {low | medium | high | critical}

Code above start reconfigure process with priority what you want. Different priorities show different questions into Dialog menu as goes into table below:

| Priority | Low | Medium | High | Critical |
|--|-----|--------|------|----------|
| <i>Conection method (socket unix, tcp/ip, tcp/ip +ssl)</i> | X | - | - | - |
| <i>Admin Autentication Method (ident/password)</i> | X | - | - | - |
| <i>User Autentication Method (ident/password)</i> | X | X | - | - |
| <i>Database Admin Name (for postgres database)</i> | X | - | - | - |
| <i>Database User Name (for your package)</i> | X | - | - | - |
| <i>Password (for you database package)</i> | X | X | X | - |
| <i>Database Name (for you package)</i> | X | - | - | - |
